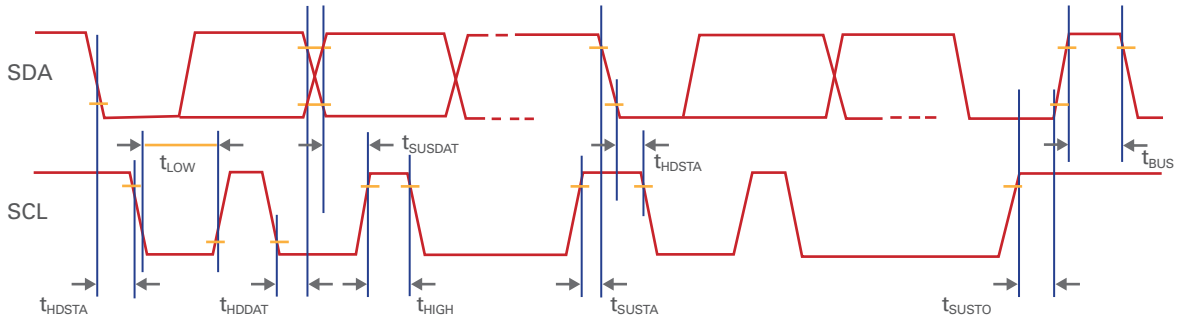
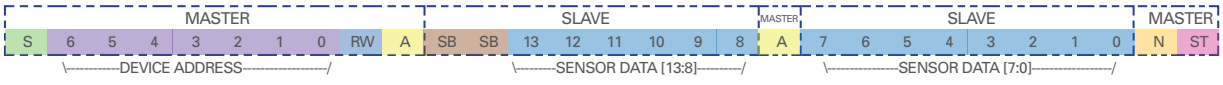
I²C TIMING DIAGRAM*



MERIT SENSOR 1420 I²C COMMUNICATION

Communications to the 1420 is read only. To read the pressure counts, the master performs a read request by asserting a start condition, sending the 7 bit address of the part (If the part has an open address, 7 bits of anything is acceptable), and sets the read/write bit. The master then waits for an acknowledgment. The acknowledgment is sent by the pressure sensor along with 2 bits of status and bits 13:8 of the pressure counts, the master acknowledges the first 8 bits, and the pressure sensor sends the remaining 8 bits of data. The Master then does not acknowledge and sends a stop condition signaling the end of the transaction.



S	Start Conditioning	#	Device Slave Address	#	Data Bit
RW	Read/Write Bit	A	Acknowledge Bit	N	No Acknowledge Bit
ST	Stop Condition	SB	Status Bits		

Status Bits		
0	0	Normal Operation, Good Packet
